01 Executive Attribution Summary

Realized and assumption-based effects

ATTRIBUTION EVIDENCE

Both lanes reconcile

EVIDENCE COMPLETENESS · 5/5

ATTRIBUTION CONCLUSION

The portfolio's realized active return was -0.6pp, led by a -0.8pp public-equity selection effect S4. Governed ex ante attribution is +0.4pp on persisted one-year expected returns, with fixed-income selection the largest positive effect S5. Both lanes reconcile within their returned tolerance, but their realized linked and single-period expected bases are not interchangeable S4 S5.

HISTORICAL ACTIVE RETURN	LARGEST HISTORICAL EFFECT	EX ANTE ACTIVE RETURN	EX ANTE RESIDUAL
-0.6pp	-0.8pp	+0.4pp	0.0bp
12 months to 2026-06-30 S4	Public equity selection S4	One-year expected basis S5	Within tolerance S5

AT A GLANCE

AREA	EVIDENCE-BASED FINDING	STATUS
Historical result	Active return was -0.6pp; public-equity selection was the largest negative effect S4.	Available
Ex ante result	Expected active return is +0.4pp; fixed-income selection is the largest positive effect S5.	Available
Reconciliation	Both total effects reconcile to their returned active return within tolerance S4 S5.	Passed
Assumptions	Ex ante effects use persisted base-currency expected returns and current cohort weights S5.	Assumption
Coverage	All required fictional TEST sources are available S1 S2 S3 S4 S5.	Complete

Scope

This is a monitoring analysis, not an investment recommendation or forecast. Ex ante expected returns and effects are assumptions, not guarantees.

Key judgment — headline signal

Observation: The fictional TEST report carries a reconciled-lanes signal versus the prior unresolved status S1. Why it matters: This signal focuses oversight on the report's most decision-relevant condition. Uncertainty: Evidence coverage may exclude newer or more detailed observations. What would change the view: A governed refresh showing a different signal or breached threshold.

Key judgment — primary measure

Observation: Historical active return is -0.6pp in the TEST evidence S2. Why it matters: This measure establishes the baseline for comparing later governed results. Uncertainty: The source basis may omit newer observations outside this fixture. What would change the view: A refreshed source report showing a change above 1%.

Key judgment — monitoring priority

Observation: Ex ante residual is 0.0bp in the TEST evidence S3. Why it matters: This result determines which item receives priority in the next monitoring cycle. Uncertainty: Supporting coverage may omit later filings or corroborating detail. What would change the view: A new filing or report that resolves the item or changes it by 1%.

02 Benchmark and Data Basis

The two attribution lanes use different evidence

Portfolio	**Example Attribution Portfolio (TEST)** S2
Period	**2025-07-31 to 2026-06-30** S4
Parent cohort	**Root** S2
Benchmark role	**Policy** S4
Base currency	**USD** S2
Historical basis	**Monthly total returns; beginning-of-period weights** S4
Ex ante basis	**One-year expected returns; current normalized cohort weights** S5
Data scope	**Fictional TEST data** S1

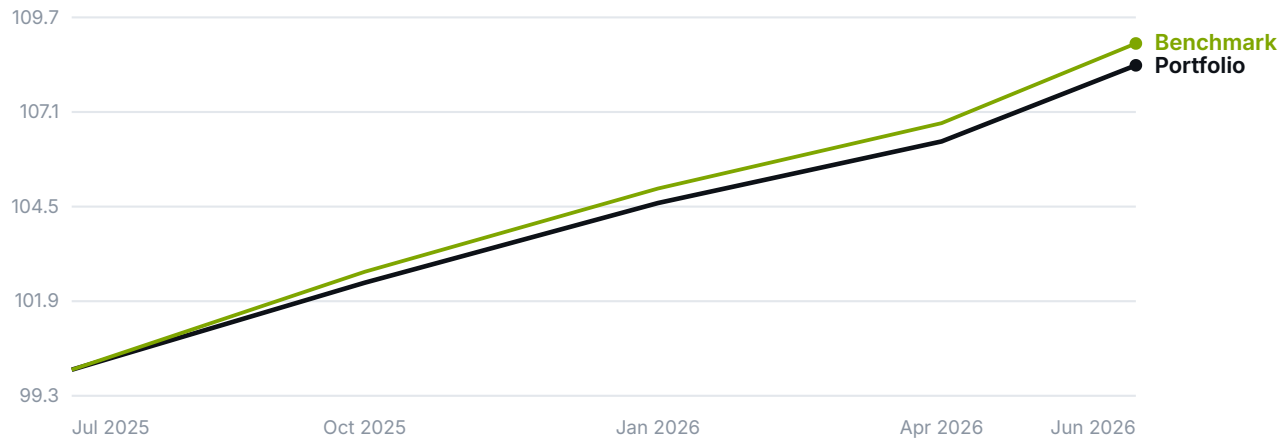

METHOD BOUNDARY

LANE	WEIGHTS	RETURNS	HORIZON / LINKING	METHOD VERSION	SOURCE
Historical	Beginning of period	Realized total return	12 monthly periods / symmetric Carino	realized_brinson_fachler	S4
Ex ante	Current actual and persisted policy weights, normalized	Annualized expected return	One expected period / no linker	1.0.0	S5

03 Historical Returns Context

Observed performance provides context, not causal attribution

GROWTH OF 100 (TEST)

STANDARD PERIODS TO 2026-06-30

PERIOD	PORTFOLIO	BENCHMARK	EXCESS	COVERAGE
QTD	2.8%	3.2%	-0.4pp	Complete
YTD	4.6%	5.1%	-0.5pp	Complete
1Y	8.4%	9.0%	-0.6pp	Complete
3Y (ann.)	7.1%	7.5%	-0.4pp	Complete

Returned labels, annualization and coverage are preserved S3.

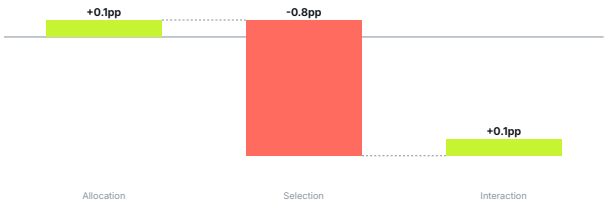

Analysis — Relative returns trailed recently

Observation: The portfolio trailed over all three periods: QTD, YTD and 1Y S3. Why it matters: The pattern establishes context for attribution results. Uncertainty: Aggregate return coverage does not identify causal effects. What would change the view: A later full-period report showing sustained positive excess return.

04 Historical Attribution

Realized Brinson-Fachler effects with symmetric-Carino linking

ALLOCATION → SELECTION → INTERACTION

Returned linked effects S4.

HISTORICAL RECONCILIATION AND METHOD

Active return	**-0.6pp** S4
Total effects	**-0.6pp** S4
Residual	**0.0bp** S4
Tolerance	**0.00000001pp** S4
Method	**Realized Brinson-Fachler** S4
Linking	**Symmetric Carino** S4
Currency	**USD** S4

HISTORICAL SEGMENT TOTAL EFFECTS (TEST)

HISTORICAL TOTAL EFFECTS

EFFECT	CONTRIBUTION	SOURCE
Allocation	+0.1pp	S4
Selection	-0.8pp	S4
Interaction	+0.1pp	S4
Total attribution	-0.6pp	S4

HISTORICAL SEGMENT EFFECTS

SEGMENT	ALLOCATION	SELECTION	INTERACTION	TOTAL
Public equity	+0.1pp	-0.8pp	+0.1pp	-0.6pp
Fixed income	+0.1pp	+0.2pp	0.0pp	+0.3pp
Private assets	-0.1pp	-0.2pp	0.0pp	-0.3pp

Rows are returned effects and are not recalculated S4.

Analysis — Equity selection drove detractor

Observation: Public-equity selection is the largest detractor, and resolved managers have one open finding S4 S6. Why it matters: Effect and diligence evidence concentrate oversight there. Uncertainty: The balanced-regime model is contextual and not causal S7. What would change the view: Closed findings or refreshed results identifying another leading effect.

05 Governed Ex Ante Attribution

Single-period expected effects from persisted assumptions

GOVERNED EX ANTE SEGMENT TOTAL EFFECTS (TEST)

Assumptions, not forecasts

The one-year expected returns and resulting effects are assumptions, not forecasts or guarantees S5.

EX ANTE TOTAL EFFECTS

EFFECT	CONTRIBUTION	SOURCE
Allocation	+0.1pp	S5
Selection	+0.2pp	S5
Interaction	+0.1pp	S5
Total attribution	+0.4pp	S5

EX ANTE SEGMENT EFFECTS

SEGMENT	PORTFOLIO WT.	BENCHMARK WT.	PORTFOLIO EXP. RETURN	BENCHMARK EXP. RETURN	ALLOCATION	SELECTION	INTERACTION	TOTAL
Public equity	55.0%	50.0%	7.8%	7.5%	+0.1pp	+0.2pp	0.0pp	+0.3pp
Fixed income	30.0%	35.0%	4.8%	4.1%	+0.1pp	+0.2pp	0.0pp	+0.3pp
Private assets	15.0%	15.0%	8.0%	9.3%	0.0pp	-0.2pp	0.0pp	-0.2pp

Inputs and effects are returned by the governed ex ante contract S5.

Reconciliation basis

The reconciliation below preserves the returned expected-active-return, residual, method, horizon, source, and currency fields S5.

EX ANTE RECONCILIATION AND METHOD

Expected active return	**+0.4pp** S5
Total effects	**+0.4pp** S5
Residual	**0.0bp** S5
Method / version	**Expected Brinson-Fachler / 1.0.0** S5
Horizon / linking	**One year / none** S5
Return sources	**Allocation and benchmark expected return base** S5
Assumption set / regime	**Not linked / Not linked** S5
Currency	**USD** S5

Analysis — Assumption lineage remains incomplete

Observation: Ex ante active return is +0.4pp, but no assumption set or regime is linked S5. Why it matters: Persisted inputs cannot be tied to a named release. Uncertainty: Input dates may differ by segment. What would change the view: A named release and regime record linked to every segment.

06 Historical-versus-Ex-Ante Scope and Comparison

Directional comparison with explicit basis separation

SEGMENT EFFECTS BY ATTRIBUTION LANE

HISTORICAL	EX ANTE	
PUBLIC EQUITY	-0.6	0.3
FIXED INCOME	0.3	0.3
PRIVATE ASSETS	-0.3	-0.2

Basis difference

Historical effects use realized monthly observations and symmetric-Carino linking; ex ante effects use current normalized cohort weights and one expected period. The values are not directly interchangeable S4 S5.

DIRECTIONAL COMPARISON

SEGMENT	HISTORICAL TOTAL EFFECT	EX ANTE TOTAL EFFECT	DIRECTION	BASIS NOTE
Public equity	-0.6pp	+0.3pp	Changed Sign	Realized linked vs expected single period S4 S5
Fixed income	+0.3pp	+0.3pp	Same Sign	Realized linked vs expected single period S4 S5
Private assets	-0.3pp	-0.2pp	Same Sign	Realized linked vs expected single period S4 S5

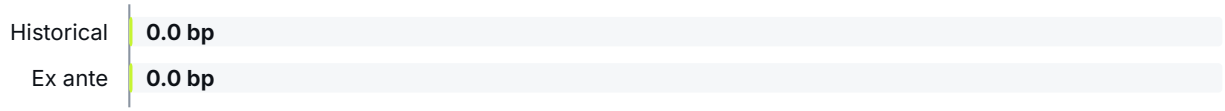

Analysis — Public equity changes sign

Observation: Public equity is -0.6pp historically and +0.3pp ex ante S4 S5. Why it matters: The sign change separates experience from expectations. Uncertainty: The lanes use different periods and weight bases. What would change the view: Refreshed persisted results on the intended policy basis.

07 Diagnostics and Limitations

Reconciliation, coverage and model boundaries

RESIDUAL VS TOLERANCE (BP)

RECONCILIATION DIAGNOSTICS

LANE	COVERAGE	RESIDUAL	TOLERANCE	WITHIN TOLERANCE	WARNINGS
Historical	Available	0.0bp	0.00000001pp	Yes	None S4
Ex ante	Available	0.0bp	0.00000001pp	Yes	Assumption set and regime IDs are null S5

- Historical effects cover 12 complete monthly observations and use returned symmetric-Carino linking S4.
- Ex ante effects use current actual and persisted policy benchmark weights normalized within the root sibling cohort S5.
- Persisted expected returns are in USD; currency effects are not separately included S5.
- Assumption-set and regime identities are not attached to the persisted expectations S5.
- Missing evidence would remain unavailable rather than being treated as zero.

08 Coverage

Availability of every expected source

Capabilities	Available	Portfolio Analytics live fictional TEST access S1
Portfolio and structure	Available	Root cohort; three segments S2
Historical returns context	Available	Complete through 2026-06-30 S3
Historical attribution	Available	12 monthly periods; residual within tolerance S4
Governed ex ante attribution	Available	One-year expected basis; residual within tolerance S5
Largest-detractor manager findings	Available	One open finding for resolved public-equity managers S6
Macro regime	Available	Balanced regime context for the historical period S7
